- **Space-saving**
No loss of parking space since there are no guide rails extending into the garage
- **Quiet door travel**
- **Easy fitting** thanks to door frame
- **4 types of door design**
 - perforated steel sheet
 - smooth aluminium sheet
 - PU-Insulated sections
 - open-for-infill (OFI) option up to a total door leaf weight of 200 kg
- **Optional wicket door**

Size range (style-dependent)

You can find more information about collective garage doors in the Collective Garage Door ET 500 brochure and on the Internet – www.hoermann.com

The operator technology is optimised to the sliding door and the specific requirement. You can choose between 2 operator models: SupraMatic H and ITO 400 FU with frequency converter control.

The precisely guided, upper twin rollers ensure a quiet door travel and almost silent opening and closing.

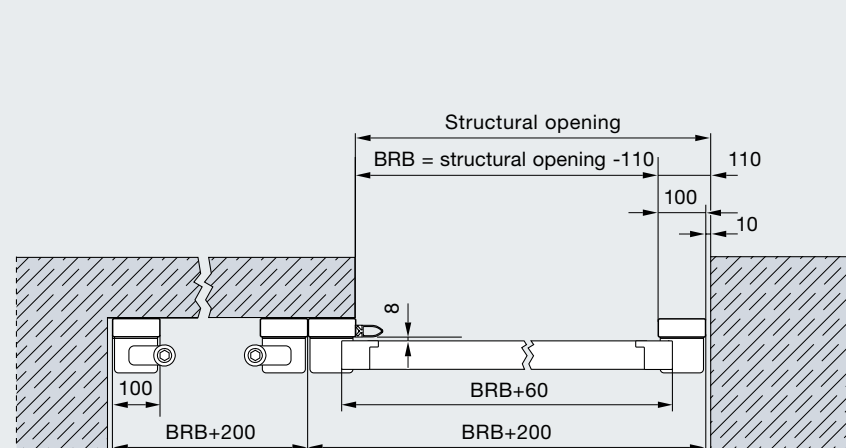

Safety profiles located on the closing edge of the sliding door and on the inlet reduce the risk of trapping. The photocell located in the door opening increases safety.

The bottom guide rollers with ball-bearing support the door and keep the sliding door securely open.
