Steel and stainless steel sliding doors FST

Fire and smoke-tight sliding doors, multi-purpose sliding doors, hinged garage doors

NEW: Hold-open devices and fire detectors
Hörmann brand quality
Future-oriented and reliable

In-house product development
Growing and constantly changing functional and safety requirements necessitate continuous new construction/equipment developments and improvements, especially when it comes to moveable construction components such as doors. In this area, our qualified development teams time and again prove their great specialised expertise.

Highly sophisticated production methods
We at Hörmann rely on the latest production technology at our specialised factories. Computer-controlled operations ensure dimensionally accurate elements with perfectly fitted fittings and functional parts.
As Europe’s leading manufacturer of doors and frames, we are committed to high product and service quality. This is how we set standards on an international scale.

Highly-specialised factories develop and manufacture construction components that are marked by excellent quality, functional safety and a long service life.

Our presence in the global economy’s key regions makes us a strong, future-oriented partner for industrial and public construction projects.

Fire testing centre with test laboratory
Our new and further developments are constantly tested for the required fire resistance and smoke-tightness through in-house fire tests at our fire testing centre. The knowledge gained from these tests ensures high fire protection for buildings. They also allow us to optimally prepare our innovations for the official inspections by the authorised test centres for official approvals.

Expert building support
Experienced specialists of our customer-oriented sales organisation support you from the planning stage, through technical clarification up to the final building inspection.

Expert fitting is guaranteed by experienced Hörmann fitters and the specialised trained staff of Hörmann’s partners.
Hörmann fire protection elements
The right solution for any requirement
Steel and stainless steel construction project doors

Steel and stainless steel multi-function doors offer crucial advantages for architects and building owners: Doors with different functional requirements that are fitted in the same storey match perfectly thanks to their identical look. Steel and stainless steel doors STS / STU feature a flush-fitting, elegant appearance as well as unlimited colour options and many frame variants.

Multi-function doors

They are characterised by their matching appearance. The advantage for architects and building owners: Doors that fulfil different functional requirements and are fitted on the same floor are perfectly matched to one another.

Fully glazed tubular frame parts and automatic sliding doors

Hörmann aluminium and steel fire-rated and smoke-tight doors and glazings in the T30, T60 and T90 models will convince you with certified safety, perfect function and a 100 % matching door appearance. With Hörmann automatic sliding doors, you are combining the transparency of tubular frame parts with the requirements of fire protection and barrier-free construction. These products allow Hörmann to provide a uniform fire protection concept for use in architecturally demanding construction projects.

Visibility windows

Hörmann visibility glazings are used as windows or room-high elements to provide more light and better visibility. Visibility glazing is available for requirements like heat and acoustic insulation or radiation protection. All versions are offered in fire-retarding F30 and fire-resistant F90 variants. Individual solutions can be implemented using rail divisions, recesses and angles.
Sustainably produced
For trend-setting construction

Sustainability documented and approved by the ift in Rosenheim

Hörmann received confirmation of sustainability through an environmental product declaration (EPD)* in accordance with ISO 14025 from the Institut für Fenstertechnik (ift – Institute of window technology) in Rosenheim. The inspection was based on the Product Category Rules (PCR) Doors and Gates from ift Rosenheim GmbH, issue PCR-TT-0.1. Environmentally-friendly production was confirmed by a life-cycle analysis in accordance with DIN ISO 14040 / 14044 for all sliding doors.

Sustainably produced fire-rated and smoke-tight elements from Hörmann

**Environmentally friendly production**
A comprehensive energy management system ensures environmentally-friendly production.

**Regional raw materials**
The majority of applied raw materials are purchased from Germany and Central Europe.

**Long-lasting products**
A long service life and low maintenance costs thanks to the use of high-quality materials.

Sustainable construction with Hörmann’s expertise

Hörmann has been able to gain great expertise in sustainable construction through various projects. We also apply this know-how to support your projects.

Simple and sustainable planning
With Hörmann’s Architect’s Program

The Architects’ Programme
More than 9000 drawings for over 850 products

Planning with Hörmann products is now even easier thanks to a modern, user-friendly interface. Clearly structured navigation via drop-down menus and symbols, as well as a search function, provide faster access to texts for invitation to tenders and drawings (in DWG and PDF format) of over 850 Hörmann products. In addition, BIM data can be provided for many products for the Building Information Modelling process, enabling efficient planning, drafting, construction and management of buildings. Photos and photo-realistic presentations provide additional information on many products.

The Architects’ Program is available to you as a web version at www.hormann.co.uk/forums/architects-forum/architects-program or can be downloaded free-of-charge from the Hörmann Architects’ Forum.

We are a member of the professional association for digital building products in the Federal Association of Building Systems e.V.
The cylindrical track roller and the stable track roller, in conjunction with the patented track, work together to provide an optimal force balance. Quiet operation and easy actuation is ensured, thanks to a suspension with ball-bearing. The track can be precisely adjusted in three dimensions using adjusting screws. A track panel in the colour of the door leaf results in a harmonious overall appearance.
A combination of a steel or stainless steel sliding door with a SupraMatic HT or ITO 400 operator allows for fast opening and closing in daily operation. The operators SupraMatic HT and ITO 400 FU with soft start and soft stop as standard are recommended for a particularly gentle and quiet door travel. The door can be conveniently operated via a hand transmitter, push button or key switch. In case of fire, a patented mechanism is used to unlock the operator. The door is then reliably closed via weights.

This optional door version is an alternative to double-leaf hinged doors in construction projects, e.g. in entrance areas. The clear passage is extended, since the door in the inlet area stops flush with a stainless steel fascia on the wall, ensuring that the elegant appearance is not compromised by a guiding profile. If the parking area is designed as a recess solution with recess flap, the door is practically invisible. Security is ensured through spring-loaded stainless steel guiding bolts, intumescent coating and rubber double seal.
Quality in the details
High-quality door construction for demanding architecture
**Slim overall construction**
- Depth of only 132 mm
- Recess width for recess flaps: 180 mm to max. 380 mm

**Track panel**
- Matches the door leaf
- Galvanized, RAL to choose or stainless steel
- Easy fitting with few screw connections

**Closing weights**
- Easy fitting and maintenance with screw-on weights
- Galvanized or stainless steel

**Guiding profile / centring device**
- Centring device for precise door guidance in the guiding profile

**Damper**
- Galvanized or stainless steel
- Integrated into door leaf for single-leaf EI 30 fire sliding doors
- T30 doors: A damper is not required for door sizes up to 9 m²

**Integrated floor track roller**
- Horizontally adjustable
- Concealed in door leaf after fitting

**Hydraulic track control**
- For continuously adjustable closing speeds (0.08 – 0.2 m/s)
- Invisibly integrated into the weight box

**Wicket door**
- Without threshold for escape routes acc. to DIN EN 179 and EN 1125
- With 22 mm threshold for additional stability and for ascending floors or parking ramps, e.g. in underground garages

**Wicket door monitoring via radio**
- Concealed radio magnetic contact in the wicket door
- No possibility of operational damage
- Optional spiral cable and socket at the end of the door leaf with concealed cable routing in the door leaf

**Glazing in wicket door and door leaf**
- Maximum glass size of 500 mm × 1000 mm
- Glazing size: 468 mm × 815 mm as standard

**Grip and recessed handles**
- High-quality stainless steel version as standard

---

Approved and certified in accordance with EN 12605 class C5 (long-term function tests with 200000 door cycles)
Surface finishes and colours
Galvanized, colour-coated or stainless steel

Surface finishes and colours
The flush and fully bonded sliding doors are delivered in galvanized sheet steel as standard. For the door leaf and door leaf on the wicket door you can choose between the standard Pearlgrain and smooth sheet steel surfaces. The frame parts are supplied with a smooth surface in both versions. For a harmonious door appearance, the doors including frame parts are optionally available in primed Grey white RAL 9002 or with powder-coated primer in 7 preferred colours, RAL to choose, metallic colours or NCS colours and as an exclusive powder coating in Corten steel. We can also provide you with frame parts in an inexpensive, galvanized version for coloured doors on request.

Stainless steel version
For special visual or construction requirements, doors in stainless steel V2 A, 1.4301 with a 240 K grain size are available. All components, such as the door leaf, tracks, cladding, weight boxes, cables, rollers and support brackets are made of stainless steel. We also deliver optional closing weights in stainless steel V2 A, 1.4301.

Additional versions on request.

Door leaf design
1. Fire protection material
2. Fully bonded
3. Optional galvanized sheet steel: stainless steel V2 A, 1.4301
4. Optional: Priming in RAL 9002 or primer powder coating in 7 preferred colours or in RAL to choose, metallic colours or NCS colours and as an exclusive powder coating in Corten steel
Pearlgrain version
A robust and highly resistant surface finish
for warehouses and high-traffic areas

Surface finishes

- Pearlgrain, galvanized
- Smooth sheet steel, galvanized
- Stainless steel V2 A, 1.4301, K 240

Priming

- Grey white
  - RAL 9002

Preferred colours

- Flame red
  - RAL 3000
- Anthracite grey
  - RAL 7016
- White aluminium
  - RAL 9006
- Grey aluminium
  - RAL 9007
- Pure white
  - RAL 9010
- Traffic white
  - RAL 9016

RAL to choose
We also supply all doors optionally in RAL to choose, metallic colours, or NCS colours.

Corten steel NEW
For an exclusive view, all doors are available in the high-quality powder coating with the visual and tactile effect of Corten steel.

All colours based on RAL.

Multi-purpose sliding doors FST MZ
Single-leaf, double-leaf and telescopic versions

Multi-purpose
- Single-leaf
- Double-leaf
- Telescopic, double, triple

Acoustic rating
With mineral wool infill up to 29 dB

Wicket door
- Single-leaf
- Double-leaf
- Telescopic

Stainless steel
V2 A, 1.4301

Further Information
- Surface finishes / colours page 14
- Operators page 24
- Wicket doors page 20
- Special equipment page 26
Multi-purpose doors are supplied as standard with honeycomb infill. External doors are optionally available with mineral wool infill, track cover and hold-open locking function. Aqua multi-purpose doors come with water-resistant PU infill. They are available in steel and stainless steel.
Wicket Doors
Version without threshold also approved for smoke-tight sliding doors
Design features

- Rebated door construction
- Version without threshold for escape routes acc. to DIN EN 179 and EN 1125
- Version with 22 mm threshold for additional stability and for ascending floors or parking ramps, e.g. in underground garages
- With smoke protection function up to 20 m² door surface
- Up to 2 wicket doors per door leaf
- Wicket door opening in both directions, depending on the source of danger (also in opposite direction of opening)
- Optional glazing: standard size 468 x 815 mm, special size max. 500 x 1000 mm

Wicket door monitoring via radio

- Radio transmission with magnetic contact and transmitter in door leaf
- Separate receiver incl. wall fitting
- Optional latch switching contact and electric strike (signal transmission system with concealed wiring and spiral cable at end of door leaf)

Overhead door closer

- Standard slide rail overhead door closer HDC 35
- Optional slide rail overhead door closer TS 5000
- Optional integrated overhead door closer ITS 96

Sports hall recessed handle NEW

- As standard in stainless steel
- Flush-fitting track application, minimally protruding with version according to DIN EN 179
- Emergency exit lock acc. to DIN EN 179
- Approved for escape routes

Fittings

- 3-way adjustable galvanized hinges for easy adjustment of the door
- Optionally in stainless steel or RAL colours

Lock variants

- Mortice lock for fire-rated and smoke-tight doors in accordance with DIN 18250 (standard BKS 1206)
- Optional panic function in accordance with EN 179 and EN 1125 for wicket doors opening into the reveal

Wicket door versions

- Version without threshold for escape routes acc. to DIN EN 179 and EN 1125
- Version with 22 mm threshold for additional stability and for ascending floors or parking ramps, e.g. in underground garages

Approved variants of the wicket door

- Single-leaf with wicket door
- Single-leaf with two wicket doors
- Double-leaf with three wicket doors
- Double-leaf with four wicket doors

Sports hall recessed handle according to DIN EN 179
Flush-stopping sliding door
For maximum clear passage width

Flush-stopping fire sliding door without guiding profile

In this exclusive solution for construction projects, the door closes flush with the wall thanks to a stainless steel fascia. The full clear passage remains available. There is no need for a guiding profile which would disturb the overall appearance.

Versions / functions
- T30 / EI 30 fire sliding door, flush-stopping
- Spring-loaded stainless steel guide bolt, intumescent coating and rubber double seal ensure safety
- Flush, fully bonded door sets
- Single-leaf
- Max. size 7500 x 4500 mm
Recess and ceiling flaps
For an inconspicuous integration of the door

With these solutions, sliding doors can be inconspicuously integrated in the wall and ceiling. A vertical recess flap blends the inlet and outlet areas of the door. The minimum width for a recess flap is 180 mm. In the lintel area, the tracks can be horizontally blended with a ceiling flap. It is manually closed. The opening is triggered automatically through a control. Recess and ceiling flaps are also available for telescopic sliding doors. The flaps are available galvanized, primed, coated in colour or in stainless steel V2 A, 14301. Optionally available with stainless steel cladding frame for cladding with gypsum board, timber or tiles.
Stainless steel fire sliding doors that require opening and closing several times a day can be equipped with a convenient and fast operator. The operator is maintenance-free and particularly suited for high-traffic areas.

• Quick opening and closing during daily operation
• A patented compensator release system unlocks the operator in case of fire
• Reliable closing of the fire sliding door by weights in case of fire

1 Operator SupraMatic HT
• Up to 800 kg weight of door leaf
• Up to 6090 mm clear passage width
• Impulse operation “Open-Close”
• Operation via hand transmitter or button
• With internal control as standard
• Optionally with external control 360 with automatic timer

2 Chain drive operator ITO 400
• Up to 2500 kg weight of door leaf
• Up to 8500 mm clear passage width
• Press-and-hold or impulse operation “Open-Close” **NEW**
• Operation via hand transmitter or button
• With external control A 445 as standard
• Optionally as FU version with external control B 460 FU with soft start and soft stop
Opening aid

Automatic door opening with press-and-hold operation. The integrated hold-open device ensures that the door leaf is secure in the open position. The door is closed via closing weights by actuating the hand button. The opening aid is maintenance-free and optionally available with a key switch. It is ideal for opening large doors.

Controls

1. External control 360
   - Optional for SupraMatic HT
   - With automatic timer
   - With second opening width, half-open
   - With warning lights connection

2. Control A 445
   - As standard for ITO 400

3. FU control B 460 FU
   - Optional for ITO 400
   - With soft start and soft stop

Control elements

1. 4-button hand transmitter HS 4 BS
   - Optional for SupraMatic HT

2. Key switch STUP 50 / STAP 50
   - Optional for SupraMatic HT and ITO 400

3. Push button DT 02
   - Optional for SupraMatic HT and ITO 400

4. Radio internal push button FIT 1 BS
   - Optional for SupraMatic HT

5. Warning lights
   - Optional for SupraMatic HT with external control 360
   - Optional for ITO 400

Convenient operator solution with the optional SupraMatic HT and ITO 400 operators
Compensator

The compensator allows for free positioning of the door leaf. This means the door can be easily opened, for example only halfway, making it ideal for fire sliding doors that are operated multiple times each day. The door closes automatically via the compensator carriage and counter weight in the case of fire, with the push of a button or during a power failure. The radial damper for regulating the required timer speed (5 – 12 cm/s) is integrated in the compensator carriage.

Lockable door leaf and wicket door

Single- and double-leaf fire sliding doors are optionally available with hook catch locks or curved bolt locks with a profile cylinder in the door leaf.

Hook catch lock / curved bolt lock
- Backset 120 mm, PC and RC
- Backset 250 mm, profile cylinder; for example, for recess flaps

For simple retrofitting of single- and double-leaf doors, a retrofit lock is available.

Anti-collision bollard and collision guard

Available as optional crash protection for galvanized or painted RAL 1021 (Rape yellow) sliding doors.

Anti-collision bollard (W × H)
- 1000 × 114 mm

Collision guard (W × H)
- 1250 × 400 mm, type 1
- 625 × 400 mm, type 2
Hold-open devices
Conveniently opened during daytime operation and safely closed in case of fire

NEW

FSA-Basis hold-open device control centre 1
The control centre combines the power supply, warning signals, fire detector evaluation, manual release button and reset device in a compact housing. In addition, status and alarm states are signaled via LED lamps or via an acoustic signal. Furthermore, fire detectors, magnets, recess flaps and fire alarm systems can be easily connected.

FSA-Plus hold-open device control centre 2
For reliable operation, even in the event of power failures, the FSA-Plus version has battery backup. It is also particularly suitable for the controlled use of ceiling and recess flaps in combination with sliding doors. The functional scope corresponds to that of the FSA-Basis hold-open device control centre.

Visual / acoustic alarm system FSA-OAW 3
The extension for the FSA-Basis and FSA-Plus hold-open device control centres in conjunction with a Hörmann flashing warning light provides a visual and acoustic warning during door travel.

Visual fire detector H-RM-4070 4
The visual smoke detector works according to the familiar scattered light principle and thus detects the smoke development of many different fires. The sensor chamber contains a visual sensor capable of measuring both reflected and normal scattered light. Algorithms make alarm activation of the detector very reliable.

Thermal detector H-TM-4070 5
The thermal detector has an open housing that allows the ambient air to circulate freely around the thermistor. The air temperature is thereby measured every 2 seconds. A microprocessor stores the temperature measurement data and compares it to the preset limits to determine if a preset maximum value – the alarm threshold – has been reached.

The illustrated door views show versions with standard guiding, wall fitting, and without smoke protection function.

Notice
For a recess width ≤ 340 mm, a door leaf with recessed lever handle on both sides (vertically offset) is required. For doors with fitted traffic leaf, recessed lever handles on both sides and an integrated overhead door closer Dorma ITS 96 are required. Retrofitting of recess flaps in existing door systems is not possible, due to the required larger door overlap.

The construction tolerances to be complied with depend on the requirements provided in the official approval of the fire and smoke-tight sliding doors.

Cladded recess flaps
Cladding on a stainless steel cladding frame with timber, gypsum and tiles is possible up to a thickness of 10 mm. Max. cladding weight: 25 kg/m²

Space requirements and edge gaps deviate from the values for the standard flaps.
