THE NEW GENERATION OF SMART GARAGE DOOR OPERATORS FROM HÖRMANN UK

Hörmann UK's new generation of SupraMatic and ProMatic garage door operators provide the perfect combination of energy efficiency, speed and convenience. The new operators also have more smart technology features than ever before, making them ideal for today's busy lifestyles and modern homes.

The new Series 4 operators offer significantly faster door opening than their predecessors, with an increase of up to 40% for the ProMatic 4 and an impressive 75% increase for the SupraMatic 4. The new range also provides outstanding levels of energy efficiency, with LED lighting for bright garage illumination and a low power consumption of less than 1 watt of electricity when in stand by mode.

All new operators have an intelligent HCP (Hörmann Communication Protocol) interface and with a simple plug-in accessory are fully compatible with SmartHome systems such as Amazon Alexa and Google Home Hub. The operators can also be controlled via mobile phones or tablets by using the free downloadable Hörmann BlueSecure App. The SupraMatic range comes with Bluetooth connectivity built in as standard, whilst there is an optional Bluetooth antenna kit available for the ProMatic range. The Bluetooth receiver can also be turned on or off at the user's preference and the operators also come with two hand held remote fobs.

"Our new range of ProMatic 4 and SupraMatic 4 operators are not only the fastest, quietest and most reliable door operators around but also offer greater levels of energy efficiency and additional smart technology features which will appeal to today's consumer," explains David O'Mara, marketing manager, Hörmann UK. "As well as being convenient for today's busy lifestyles, the Bluetooth connectivity also offers additional security benefits. For example users will be notified by their phone or tablet when a garage door is left partially open and they can also turn the garage operator light on or off via the App. The system can also be set up on more than one smartphone or tablet, which makes them ideal for busy households."

The operators also feature a new easy-to-use programming system meaning all operator functions can be set by entering a simple two-digit code in a matter of seconds. All three

operators also have larger and more convenient connection compartments with easy-to-reach connections.

The new Series 4 operators retain all the important safety and security features that Hörmann UK is well known for, such as reliable automatic cut out if the door encounters an obstacle and automatic door latching to prevent forced entry into the garage.

The operators are tested and certified in accordance with stringent safety requirements and European Standards.
