### **New Glazing Options for Hörmann Sectional Doors**

Hörmann UK has expanded its market-leading sectional door range with the introduction of two new glazing options, designed to provide both functionality and enhanced aesthetics. The latest additions include a sleek, narrow 250mm aluminium glazing frame for M and L ribbed sectional doors, and a contemporary stainless-steel frame with triple glazing for L ribbed garage and side doors. These two new options not only help to maximise daylight within the garage but also provide homeowners with increased choice for personalisation and design creativity.

The new 250mm aluminium glazing frame, with its discreet and modern design, comes fitted with Hörmann's innovative and durable Duratec synthetic glazing as standard. This high-performance material features a specialist coating that ensures a permanently clear view and enhanced thermal insulation. Ideal for use as an intermediate door section, the frame can be installed without rails in widths of up to 2500mm and can also be extended across the whole width of the door.

Featuring premium triple glazing made of real glass, the new stainless steel glazing frame delivers a sleek, modern aesthetic whilst ensuring long lasting durability and good thermal performance. For added privacy and style, the option of black glass is available—allowing natural daylight into the garage interior whilst effectively shielding it from outside view. To accommodate a wide range of installations, the glazing frame is offered in three different sizes, making it a flexible solution for garage and side door configurations.

Both products are supplied CO2 neutral as standard.
