

## **The Ins And Outs Of Loading Technology**

Loading areas are some of the busiest areas of industrial premises, including warehouses and distribution centres. Playing a key role in the movement of goods it is important to ensure that these areas work efficiently, and daily loading operations run smoothly. In order to do this, companies can invest in quality loading technology.

At Hörmann we provide a range of loading technology to help you take the hassle and stress out of loading and unloading. Our loading technology, including dock levellers and shelters, work to make your job easier.

### **How loading technology improves loading operations**

Investing in technology that benefits the loading and unloading process is a positive thing for businesses. If you are experiencing a high volume of deliveries or shifting a high volume of goods, integrating modern loading technology into your operations will help speed up processes, reduce risks and improve the safety of your loading area. Below we have explained in further detail just how each of our products work and how they could improve your loading operations.

### **Dock Levellers**

Hörmann [dock levellers](#) help support the movement of loads in and out of the vehicle in one horizontal direction. This has proven to improve, not only the efficiency of the loading and unloading process, but also the safety and precision too. Our Hörmann dock levellers do this by compensating for the difference in height between various vehicle loading surfaces and the loading platform of a warehouse.

What makes Hörmann dock levellers unique to others on the market is that they are equipped with additional features. They include automatic-stop valves in the lifting cylinders. These have been added to our design to ensure safe use, helping to avoid damage or harm to the user or the goods when the lorry drives away.

### **Dock Shelters & Seals**

[Dock shelters](#) provide all round protection. At Hörmann we have designed dock shelters to ensure all goods and staff are protected throughout the loading and unloading process. Our flap dock shelters have been designed to fit all lorry sizes, making these applicable to any type of loading area and business.

Our dock shelters are there to help businesses cut down on energy costs with effective protection against all weather conditions. Working to reduce the amount of heat lost when the loading bay door is open. This is a particularly important element for businesses, especially in the current climate, as business energy costs continue to rise.

## Loading Houses

We also offer a range of [loading houses](#). Since these sit externally to your building, our loading houses have been designed to save you as much internal warehouse space as possible. With a simple installation, it is quick and easy to streamline the entire loading process. Plus, with additional safety features focused on enhancing the safety and security of workers, you can be sure your staff are protected whilst working within the loading area.

Having access to quality loading technology can make all the difference when it comes to improving the efficiency of your loading operations. With our great range of loading technology available to purchase, it has never been easier for businesses. With dock levellers, dock shelters and even whole loading houses all designed with safety, speed and ease of use in mind, you can trust that our products will help take the hassle out of your day-to-day loading operations.
